Are You or Do You Know an Adult with an Autism Spectrum Disorder?

Adult ASD Study
The goal of this study is to better understand how adults with ASDs make judgments about facial expressions of emotion and personal characteristics associated with certain types of judgments.

What does the study involve?
- Brief prescreening by phone or online
- Three visits to the Center for Cognitive and Behavioral Brain Imaging at Ohio State, approximately 2-3 hours each.
  - First Visit: Eligibility screening
  - Second Visit: Make judgments about images viewed on a computer screen, and provide a DNA and saliva sample
  - Third Visit: Make judgments about images viewed on a computer screen, and an interview-based assessment
- All participants will receive $15 per hour
